PROFESSIONAL SUMMARY

Full-Stack & Application Security Engineer who ships production SaaS end to end (web, mobile, hardware integration, payments, and AI) and tests it the way an attacker would. Currently leading Dimensi HRIS at Dimensi Software (PT Dimensi Pratama Sukses), a multi-tenant HR & payroll platform with a Flutter mobile app, a Go bridge for attendance machines, a help center, and DOKU payment integration. Previously built an EMR platform with 20+ modules used by 500+ healthcare users at RS Kanker Dharmais and advanced ATiDar into a BPOM/CPOB-certified blood transfusion application. Since 2025 I also do independent security research on authorized bug bounty programs, focused on access control and APIs. Outside work, I run Navitek as a side venture, where I built Clippeak (400+ users in 3 months) and Cuanten.

KEY ACHIEVEMENTS

- Rebuilt **Dimensi HRIS** from legacy PHP onto Laravel 13 + Filament as a multi-tenant HR & payroll SaaS, with 2,200+ commits since June 2026.
- Built and scaled an enterprise **EMR** platform with 20+ modules used by 500+ healthcare users, including doctors and nurses.
- Founded **Navitek**; built **Clippeak** from zero to 400+ registered users within 3 months and launched **Cuanten**.
- Built my own **bug bounty toolkit**: a 24-skill multi-agent pack, a scoped save-point vault and wire-level verifiers, with fail-closed scope on every engagement.
- Built a **Go** bridge that connects attendance machines (face, fingerprint, card) at any client office to Dimensi HRIS; one bridge serves every tenant in production.
- Advanced **ATiDar** for the Blood Management Unit (UPD) from an early-stage system into a BPOM/CPOB-certified transfusion workflow application.
- Built **Airis**, an AI agent inside Dimensi HRIS that answers from real HR and payroll data, with a number guard and an eval suite against made-up answers.

TECHNICAL SKILLS

Languages: PHP 8+, JavaScript (ES6+), TypeScript, Go, Dart, Python, SQL

Mobile: Flutter, Dart, React Native, Expo, Play Store & App Store Release

Application Security: Access Control & RBAC Testing, IDOR / API Authorization, OAuth & Session Security, Recon, CVE Triage, OWASP Top 10 & API Top 10

Domain: Indonesian Payroll (PPh21 TER, BPJS, SPT), HR Operations, EMR & Clinical Workflows, Regulated Delivery

Web3: Solana, SPL Tokens, Wallet Integration, IPFS, Trading Bots

Web & SaaS: Laravel, Filament, Next.js, React, REST APIs, JWT, RBAC, Multi-Tenant Architecture

AI Engineering: AI Agents & Tool Calling, RAG, LLM Evals, Hallucination Guards, MCP Servers, Voice AI (Claude, Gemini, OpenAI APIs)

Integrations: DOKU Checkout, QRIS Payments, Attendance Machines (WebSocket), Kiosk Devices, Webhooks

Databases & DevOps: MySQL, PostgreSQL, Prisma, SQLite, Git, Docker, Linux VPS, Caddy, cPanel

PROFESSIONAL EXPERIENCE

Dimensi Software (PT Dimensi Pratama Sukses) | Tangerang, Indonesia **Aug 2025 – Present**
Full-Stack Developer (Remote Aug 2025 – Jun 2026; On-site since Jun 2026)

- Lead developer of **Dimensi HRIS**, an all-in-one HR & payroll SaaS for Indonesian companies: attendance, shift and rolling rosters, leave, overtime, payroll, and employee self-service, across multiple companies and branches.
- Rebuilt the legacy PHP system on **Laravel 13 + Filament**, keeping the mobile API backward-compatible so existing app installs kept working through the migration.
- Built the payroll engine with **PPh21 (TER & Article 17)**, BPJS, and DJP-compliant yearly SPT XML export.
- Developed and released **Dimensi HRIS Mobile** (Flutter) on Google Play and the App Store, with face-recognition attendance, on-device liveness checks, and GPS geofencing.
- Built **dimensi-kiosk-bridge** in **Go**, a central multi-tenant WebSocket-to-REST bridge for AiFace attendance machines (face, fingerprint, card), live in production since Aug 2026. Clients only type a domain into the machine; the tenant is resolved from the device serial number.

- Made the bridge loss-proof and two-way: punches are acknowledged only after Dimensi accepts them, and the server can push commands for clock sync, roster pull, log backfill, face enrolment, and real-time QR scan decisions.
- Built **Airis**, an in-app AI agent (Claude) with 17 tools that read attendance, payroll, leave, and request data within the user's role, search the help center, and draft import files. A number guard holds back any figure not traceable to tool data, and a 172-question eval suite tests it against the real model.
- Integrated **DOKU Checkout** for subscription payments and built **help.dimensi.id**, the product help center.

Tech: Laravel 13, Filament, PHP 8.3, MySQL, Go, Flutter, Dart, JWT, WebSocket, DOKU, REST APIs, Play Store, App Store

Navitek (Navigasi Teknologi Nusantara) | Tangerang, Indonesia **Jan 2026 – Present**
Founder & Product Engineer (Part-time)

- Founded **Navitek**, a product studio building digital products for creators and small businesses; own product strategy, engineering, launch, and growth.
- Built **Clippeak** from zero to 400+ registered users within 3 months.
- Built and launched **Cuanten** (cuanten.com), an AI content SaaS for Indonesian small businesses: turns a link or idea into carousels and short videos, schedules a month of posts automatically, takes QRIS payments, and exposes an MCP server so Claude and ChatGPT can create content directly.

Tech: Next.js, TypeScript, PostgreSQL, Prisma, Claude API, MCP, OAuth, Linux VPS, Caddy

Independent | Remote **2025 – Present**
Security Researcher (Bug Bounty)

- Research access control in multi-tenant SaaS and APIs (IDOR, RBAC parity, OAuth and session handling, cache-key and race conditions) on authorized programs at **Bugcrowd, HackerOne, Intigriti and YesWeHack**.
- Built my own operator toolkit: a 24-skill multi-agent pack (recon, access-control matrices, RBAC hierarchy checks, report triage), a save-point vault for checkpoints, test sessions and a hypothesis ledger, and wire-level verifiers.
- Work only inside each program's published scope through a fail-closed allowlist, test only between accounts I own, and report nothing until a deterministic check confirms it. Multiple reports submitted across programs.

Tech: Python, SQLite, Bash, PowerShell, Chrome DevTools Protocol, OWASP

RS Kanker Dharmais (National Cancer Center) | Jakarta, Indonesia **Jan 2024 – Jun 2026**
Full-Stack Developer (On-site)

- Built and scaled an enterprise **EMR** application (PHP, CodeIgniter) with 20+ modules used by 500+ healthcare users, including doctors and nurses, covering clinical administration, patient data, and internal service workflows.
- Advanced **ATiDar** for the Blood Management Unit (UPD) from an early-stage system into a BPOM/CPOB-certified blood transfusion workflow application, with machine-to-app integration for transfusion operations and inventory tracking.
- Engineered **AIS**, an LLM-based assistant that gives medical staff knowledge access, workflow guidance, and diagnosis-related information retrieval.
- Created **AIS Kiosk**, a 3D voice-enabled AI assistant using Three.js and the Gemini Live API with real-time lip-sync.
- Built **SiKevin**, a financial verification system that cut monthly service data retrieval from 30 minutes to 30 seconds.

Tech: PHP, CodeIgniter, Next.js, TypeScript, Python, MySQL, Gemini API, Three.js, REST APIs

DreamsHive | Tangerang, Indonesia **May 2025 – Nov 2025**
Full-Stack Developer (Contract, Remote)

- Architected **ByteLaunch.io**, a no-code Solana SPL token deployer (Nuxt 3, TypeScript) with IPFS metadata, multi-wallet connectivity, dynamic fees, and token authority management.

Tech: Nuxt.js, TypeScript, Solana, SPL Tokens, IPFS, Wallet Integration

Enclavium (DAO) | Remote **Oct 2024 – Oct 2025**
Blockchain Developer (Freelance)

- Developed a **Solana sniper trading bot** plus **Wallet Tracker** and Pump.fun bundle-checker tools for real-time on-chain analysis.

Tech: Solana, Web3, Trading Automation, Wallet Analytics

CERTIFICATIONS

Certified Application Security Engineer (Java) - EC-Council (2025)

Belajar Dasar Pemrograman JavaScript - Dicoding (2023)

JavaScript (Basic) - HackerRank (2023)

Shopee Code League - Shopee (2022)

EDUCATION

Raharja University | Tangerang, Indonesia
Bachelor of Information Systems, GPA: 3.70/4.00 | 2019 - 2023
Committee Member - KOMASI Webinar 2021
